Illuminating the world of archaeology. Archaeology conveys the excitement of archaeological discovery and explains how archaeologists think as they scientifically find, analyze, and interpret evidence. The main objective of this text is to provide an introduction to the broad and fascinating world of archaeology from the scientific perspective. Discussions on the theoretical aspects of archaeology, as well as the practical applications of what is learned about the past, have been updated and expanded upon in this fourth edition. Learning Goals Upon completing this book, readers will be able to: Discuss the theoretical aspects of archaeology. Apply what has been learned about the past. Identify the various perspectives archaeologists have.

"Archaeology: The Basics, rewritten for this fourth edition, is a short, engaging book that takes the reader on a journey through the fascinating world of archaeology and archaeologists. Written in a non-technical style by two experienced archaeologists and writers about the past, the book begins by introducing archaeology as a unique way of studying the entire span of the human past from our origins some 6 million years ago to today. The authors stress that archaeology is a global study of human biological and cultural diversity. After a brief look at early archaeological discoveries, they introduce today's multidisciplinary archaeology. Then they go on to describe the archaeological record, the archives of the past and the importance of contexts of time and space. How do we find archaeological sites and how do we explore them? Two chapters laced with examples examine these questions. Later chapters describe ancient technologies and how we study them, also the all-important subject of changing ancient environments and climate change. Zooarchaeology, flotation methods, and other ways of reconstructing ancient diet and subsistence lead us into the study of changing settlement patterns across the landscape. Next, they visit the people of the past, either as individuals or groups, calling on bioarchaeology to assist them. Two chapters discuss ancient culture change and the remarkable diversity of ancient societies and they are followed by an exploration of the spiritual realm, the exploration of the intangible. The final chapter looks at the importance of archaeology in today's world. Rich in numerous examples and contemporary thinking about archaeology, this book tries to answer an important question: What does archaeology tell us about ourselves? *Archaeology: The Basics* is essential reading for all those beginning to study archaeology and anyone who has ever questioned the past"--

Outside of scientific journals, archaeologists are depicted as searching for lost cities and mystical artifacts in news reports, television, video games, and movies like *Indiana Jones* or *The Mummy*. past. By exploring the development of archaeology, this book helps us understand what archaeology is and why it matters. In *Spooky Archaeology* author Jeb J. Card follows a trail of clues left by adventurers and professional archaeologists that guides the reader through haunted museums, mysterious hieroglyphic inscriptions, fragments of a lost continent that never existed, and deep into an investigation of magic and murder. Card unveils how and why archaeology continues to mystify and why there is an ongoing fascination with exotic artifacts and eerie practices.

National Geographic Explorer and TED Prize-winner Dr. Sarah Parcak welcomes you to the exciting new world of space archaeology, a growing field that is sparking extraordinary discoveries from ancient civilizations across the globe. In *Archaeology from Space*, Sarah Parcak shows the evolution, major discoveries, and future potential of the young field of satellite archaeology. From surprise advancements after the declassification of spy photography, to a new map of the mythical Egyptian city of Tanis, she shares her field's biggest discoveries, revealing why space archaeology is not only exciting, but urgently essential to the preservation of the world's ancient treasures. Parcak has worked in twelve countries and four continents, using multispectral and high-resolution satellite imagery to identify thousands of previously unknown settlements, roads, fortresses, palaces, tombs, and even potential pyramids. From there, her stories take us back in time and across borders, into the day-to-day lives of ancient humans whose traits and genes we share. And she shows us that if we heed the lessons of the past, we can shape a vibrant future. Includes Illustrations

A Brief History of Archaeology details early digs and covers the development of archaeology as a multidisciplinary science, the modernization of meticulous excavation methods during the twentieth century, and the important discoveries that led to new ideas about the evolution of human societies. Spanning more than two thousand years of history, this short account of the discipline of archaeology tells of spectacular discoveries and the colorful lives of the archaeologists who made them, as well as of changing theories and current debates in the field. Early research at Stonehenge in Britain, burial mound excavations, and the exploration of Herculaneum and Pompeii culminate in the nineteenth-century debates over human antiquity and the theory of evolution. The book then moves on to the discovery of the world's pre-industrial civilizations in Egypt, Mesopotamia, and Central America; the excavations at Troy and Mycenae; the Royal Burials at Ur, Iraq; and the dramatic finding of the pharaoh Tutankhamun in 1922. The book concludes by considering recent sensational discoveries and exploring the debates over processual and post-processual theory that have intrigued archaeologists in the early twenty-first century. The third edition updates this respected introduction to one of the science's most fascinating disciplines. A Brief History of Archaeology is a vivid narrative that will engage readers who are new to the discipline, drawing on the authors' extensive experience in the field and classroom.

Geophysics operations in archaeology have become well known through exposure on television. However, the technique is presented as the action of specialists and something of a mystery, where people walk about with strange contraptions, and results appear from a computer. This is not the case, however. Some scientific knowledge is needed in order to understand how the machines work and what they detect but otherwise it is only necessary to know how to handle the instruments, how to survey a field and how to interpret the computer results. This book provides all the relevant information. It explains geophysics operations in archaeology, describes the science that gives the soil properties to measure and the means by which the instruments make their measurements. Dr John Oswin is in charge of the geophysics operation of the Bath and Camerton Archaeological Society and his work has recently been the subject of a television programme. He has taught many students how to use geophysical equipment.

In 1922, Howard Carter peered into Tutankhamun's tomb for the first time, the only light coming from the candle in his outstretched hand. Urged to tell what he was seeing through the small opening he had cut in the door to the tomb, the Egyptologist famously replied, "I see wonderful things." Carter's fabulous discovery is just one of the many spellbinding stories told in *Three Stones Make a Wall*. Written by Eric Cline, an archaeologist with more than thirty seasons of excavation experience, *Three Stones Make a Wall* traces the history of archaeology from an amateur pursuit to the cutting-edge science it is today by taking the reader on a tour of major archaeological sites and discoveries, from Pompeii to Petra, Troy to

the Terracotta Warriors, and Mycenae to Megiddo and Masada. Cline brings to life the personalities behind these digs, including Heinrich Schliemann, the former businessman who excavated Troy, and Mary Leakey, whose discoveries advanced our understanding of human origins. The discovery of the peoples and civilizations of the past is presented in vivid detail, from the Hittites and Minoans to the Inca, Aztec, and Moche. Along the way, the book addresses the questions archaeologists are asked most often: How do you know where to dig? How are excavations actually done? How do you know how old something is? Who gets to keep what is found? Taking readers from the pioneering digs of the eighteenth century to the exciting new discoveries being made today, *Three Stones Make a Wall* is a lively and essential introduction to the story of archaeology.
