Reg. Price > \$9.85. Product Description. Product Details. This undergraduate text provides an introduction to the theory of Cartesian tensors, defining tensors as multilinear functions of direction, and simplifying many theorems in a manner that lends unity to the subject. The author notes the importance of the analysis of the structure of tensors in terms of spectral sets of projection operators as part of the very substance of quantum theory.

Transformations of Cartesian tensors (any number of dimensions)  
Tensors are defined as quantities which transform in a certain way  
under linear transformations of coordinates. Second order. Let  $a = a_i e_i$  and  $b = b_i e_i$  be two vectors, so that they transform according  
to  $a_j = a_i L_{ij}$ ,  $b_j = b_i L_{ij}$ . Taking the tensor product gives:
