Canine and Feline Cytology A Color Atlas and Interpretation Guide. Book • Third Edition • 2016 ... Exceptional-quality, full-color photomicrographs show both normal and abnormal tissue and also include detailed legends. Discussions of clinical, differential, ...

Ophthalmology relies heavily on the practitioner's ability to visually recognize ocular features and abnormalities. This atlas contains hundreds of full-color pictures of normal and diseased eyes and related structures of dogs and cats as they might be seen during an ocular examination to facilitate visual recognition of problems for accurate diagnosis and treatment. Features over 800 vivid full-color illustrations that aid in the recognition of structures and lesions. Works as a wonderful companion piece to Slatter: Fundamentals of Veterinary Ophthalmology Contains pictures of both normal and diseased eyes and related structures of dogs and cats to aid in the identification and diagnosis of conditions encountered during ocular examination Features a consistent, systematic organization from anterior to posterior, including the orbit, in an easy-to-use format

Make accurate diagnoses by mastering techniques for specimen collection, preparation, and evaluation! Help students face diagnostic challenges with this guide to specimen collection and evaluation! Canine and Feline Cytology: A Color Atlas and Interpretation Guide, 3rd Edition provides a comprehensive overview of diagnostic cytology for companion animals, covering all body systems. Hundreds of photomicrographs show cytology of normal structures to contrast and support identification of cytology of inflammatory, hyperplastic, and neoplastic lesions. Enhancements to this new edition include more histopathologic correlates, expanded immunochemical stains and molecular-based testing to further define the neoplastic cell type, and descriptive schematics that illustrate pathophysiologic concepts. Written by seasoned veterinary cytologists Rose Raskin and Denny Meyer - with over 80 years of combined microscopic experiences - along with 20 expert contributors, this reference offers clear, practical guidelines to sampling procedures, slide preparation, and interpretation leading to diagnoses and/or classification of the cytologic findings. Comprehensive coverage of all body systems and body fluids - and the pathological changes associated with various infectious agents - emphasizes areas in which the application of cytology has the greatest diagnostic value. Exceptional-quality, full-color photomicrographs show both normal and abnormal tissue and also include detailed legends. Discussions of clinical, differential, and cytological diagnosis accompany the illustrations of lesions and conditions in each chapter. Helpful hints for improving specimen quality are provided in discussions of common errors and problems encountered in the preparation of cytological specimens. Coverage of histology in organ system chapters demonstrates the histological or histopathologic corollary of cytologic findings. Clear, concise descriptions include sampling techniques, slide preparation and examination, and guidelines for interpretation, leading to accurate in-house and commercial laboratory diagnosis. Easy-to-use, well-organized format includes many tables, algorithms, boxes, and Key Point callouts for at-a-glance reference. NEW examples and identifiers and a new discussion on artifacts address the latest developments in canine and feline cytology. NEW! Dozens of new images include photomicrographs of blood and bone marrow cytology. NEW! All-new appendix summarizes clinically relevant information on artifacts, special tests, specific characteristics, and much more. UPDATED sampling techniques and examination guidelines include information on how and where to test for specific conditions.

Master the art and science of specimen collection, preparation, and evaluation with Canine & Feline Cytology: A Color Atlas and Interpretation Guide, Second Edition. This easy-to-use guide covers all body systems and fluids including a special chapter on acquisition and management of cytology specimens. Hundreds of vivid color images of normal tissue alongside abnormal tissue images – plus concise summaries of individual lesions and guidelines for interpretation - will enhance your ability to confidently face any diagnostic challenge. A greatly expanded image collection, with more than 1,200 vivid, full-color photomicrographic illustrations depicting multiple variations of normal and abnormal tissue for fast and accurate diagnosis Clear, concise descriptions of tissue sampling techniques, slide preparation and examination guidelines Helpful hints for avoiding technical pitfalls and improving diagnostic quality of specimens Includes all body systems and fluids as well as pathological changes associated with infectious agents Histologic and histopathologic correlates provided in all organ system chapters. User-friendly format and logical organization facilitates readability and learning. Expert contributors represent the most respected leaders in the field. NEW! Chapter on Fecal Cytology Highlighted boxes featuring Key Points provide helpful tips for best conceptual understanding and diagnostic effectiveness Photomicrographs now include more comparative histology Discussions of broader uses of stains and immunocytochemistry for differential cytologic characterization Expanded chapter on Advanced Diagnostic Techniques includes more methodology and application of current tools, representing advances in both aspiration and exfoliative cytology.

If you are looking for a book that presents a unique photographic record of dissections showing the topographical anatomy of the dog and cat: this is the atlas for you! Part of a comprehensive 3-volume set that also covers Ruminants (vol 1) and The Horse (vol 2), the Color Atlas of the Dog and Cat takes a complete look at virtually every aspect of veterinary anatomy. With this book you will be able to see the position and relationships of bones, muscles, nerves, blood vessels and viscera that go to make up each region of the body and each organ system. Rich with full-color photographs and drawings of dissections prepared specifically for these texts, each book in the series illustrates regional surface features photographed before dissection, then gives high-quality complementary photographs of articulated skeletons. Accessibly and systematically structured with each chapter is devoted to a specific body region Important features of regional and topographical anatomy presented in full color photos of detailed dissections Detailed color line drawings clarify the relationships of relevant structures Website offers drag and drop quizzes and the chance to test yourself with mcqs Informative captions give additional information necessary for proper interpretation of the images Presents anatomy in a clinical context

"This is a 'go-to' reference text for a serious cytologist." Reviewed by: Kathleen Tennant on behalf of Veterinary Record, November 2015 Comprehensive coverage of all body systems and body fluids — and the pathological changes associated with various infectious agents — emphasizes areas in which the application of cytology has the greatest diagnostic value. Exceptional-quality, full-color photomicrographs show both normal and abnormal tissue and also include detailed legends. Discussions of clinical, differential, and cytological diagnosis accompany the illustrations of lesions and conditions in each chapter.
