Chapter 7, "Food security and food

production systems," details the current

effects of climate change, the expected

decline in crop production by 2030 as a

result of climate change, and what farmers can do to mitigate some of the negative impacts. As stated by the chapter authors:

"The questions for this chapter are how far climate and its change affect current food production systems and food security and the extent to which they will do so in the future."

How will climate change affect food security?

*Food security and environmental impacts
— European ...*

Climate change and food security: Fast facts. Climate change is a threat multiplier for hungry and undernourished people. Countries with high levels of hunger are often also highly vulnerable to climate change, and have a low capacity to adapt. Climate change affects food production and availability, access, quality, utilization, and stability of food systems. In short, it impacts all aspects of the food system.

*How climate change threatens food
security (and why we're ...*

Food security is when the entire population of a country has access to enough safe and nutritious food to

maintain an active life. The opposite is food insecurity, which is a problem for lots of...

Factors affecting food security - Food security - a global ...

Climate change is the worst threat to food security and the projections are devastating. Soon, our agricultural practices may not be able to meet the world's demand for food.

The necessary link between food security and ...

Food security is an outcome of a food system. Climate change is one of the environmental drivers interacting with a food system. It will affect not only food production, but also food processing, distribution and consumption. environmental, social, political and economic drivers
