~~These original contributions on the evolution of primates and the techniques for studying the subject cover an enormous range of material and incorporate the work of specialists from many different fields, showing the necessity of a multidisciplinary approach to problems of primate morphology and phylogeny. Collectively, they demonstrate the concerns and methods of leading contemporary workers in this and related fields. Each contributor shows his way of attacking fundamental problems of evolutionary primatology.~~

~~Research Methods in Human Skeletal Biology serves as the one location readers can go to not only learn how to conduct research in general, but how research is specifically conducted within human skeletal biology. It outlines the current types of research being conducted within each sub-specialty of skeletal biology, and gives the reader the tools to set up a research project in skeletal biology. It also suggests several ideas for potential projects. Each chapter has an inclusive bibliography, which can serve as a good jumpstart for project references. Provides a step-by-step guide to conducting research in human skeletal biology~~ ~~Covers diverse topics (sexing, aging, stature and ancestry estimation) and new technologies (histology, medical imaging, and geometric morphometrics)~~ ~~Excellent accompaniment to existing forensic anthropology or osteology works~~

~~This textbook will support graduate students with learning materials rich in the basic concepts of stem cell biology, in its most widespread and updated perspective. The chapters are conceived in a way for students to understand the meaning of pluripotency, the definition of embryonic stem cells and the formation of multicellular structures such as organoids together with the underlying principles of their epigenetic. This textbook also discusses adult stem cells and the potential use of these cells, in particular neural, mesenchymal, and several types of muscular cells, and biomedical research and clinical applications. This textbook represents a vital complement to the text on Essential Current Concepts of Stem Cell Biology, also published in the Learning Materials in Biosciences textbook series.~~

~~Knowledge in the field of the biology of the extracellular matrix, and in particular of collagen, has made considerable progress over the last ten years, especially in mammals, birds and in man with respect to very important applied medical aspects. Basic knowledge in the animal kingdom overall has increased more slowly and haphazardly. We, therefore, considered it useful to organize a meeting specifically devoted to the study of the invertebrate and lower vertebrate collagens. The NATO Scientific Division financed an Advanced Research Workshop aimed at bringing together experts qualified in collagen biology (with morphological, biochemical and genetic specialization) with researchers who are currently studying collagenous tissues of invertebrates and lower vertebrates. The Medical-Biology Committee of the CNR-Rome and the University of Milan also supplied interest and support for the organization of this Meeting. The format of the workshop consisted in: 1) main lectures on the most recent aspects of collagen biology; 2) minireviews on the current knowledge of collagenous tissues in the various invertebrate phyla and in fish; 3) contributed papers on particular aspects of research in specific fields; 4) workshops on the methodology of studying collagen. As we had intended, the Workshop gave a comprehensive overview of acquired knowledge and the present state of research activity. It permitted wide interdisciplinary discussion, enabling collabora tions to be established and new research themes to be chosen. This volume contains the text of all the contributions presented at the Meeting, including posters.~~

~~Salient Features -- Reduced and Bifurcated Syllabus for 1st Semester Examination -- Chapter wise brief summary -- Chapter wise MCQs (Most Expected for semester 1 examination) -- Specimen Question paper issued by the CISCE (fully Solved) -- 10 Revision papers (Most Expected for Semester 1 Examination) As per the latest Instruction issued by CISCE's for Academic year 2021-2022~~

~~The Encyclopedia of Cell Biology offers a broad overview of cell biology, offering reputable, foundational content for researchers and students across the biological and medical sciences. This important work includes 285 articles from domain experts covering every aspect of cell biology, with fully annotated figures, abundant illustrations, videos, and references for further reading. Each entry is built with a layered approach to the content, providing basic information for those new to the area and more detailed material for the more experienced researcher. With authored contributions by experts in the field, the Encyclopedia of Cell Biology provides a fully cross-referenced, one-stop resource for students, researchers, and teaching faculty across the biological and medical sciences. Fully annotated color images and videos for full comprehension of concepts, with layered content for readers from different levels of experience~~ ~~Includes information on cytokinesis, cell biology, cell mechanics, cytoskeleton dynamics, stem cells, prokaryotic cell biology, RNA biology, aging, cell growth, cell injury, and more~~ ~~In-depth linking to Academic Press/Elsevier content and additional links to outside websites and resources for further reading~~ ~~A one-stop resource for students, researchers, and teaching faculty across the biological and medical sciences~~
