Charles Hill's Global Business Today, 4e (GBT) has become an established text in the International Business market for its excellent but concise coverage of the key global issues including the cultural context for global business, cross-border trade and investment, the global monetary system and competition in the global environment. GBT's concise chapters give a general introduction to international business - emphasizing the environmental factors, with less coverage of operations. Charles Hill is renowned for his attention to research trends and that is evident in Global Business Today, 4e through a variety of real world examples and cases from small, medium, and large companies throughout the world

As the world becomes increasingly globalized, today's companies expect to hire engineers who are effective in a global business environment. Although you can find many books covering globalization, most of them are aimed at business, management, or social sciences. Developed with engineers in mind, *Global Engineering: Design, Decision Making, and Communication* covers the theory, models, and decision making tools for incorporating globalization into engineering work. Written by a multidisciplinary team of experts in industrial, mechanical, and manufacturing engineering and organizational communications, this book is a primer on how to improve designs, make better decisions, and communicate more effectively in an international working environment. The contents of the book reflect the authors' multidisciplinary perspective and their experience in working on projects around the world. The book presents globalization as a phenomenon affecting the way companies operate and their engineering functions. It uses a case study format based on system improvement projects and real industrial projects, ranging from design to supply chain and logistics problems. This case study format allows for a natural presentation of critical technical and non-technical concepts and their complex interactions. The challenge that engineers face in a global environment results from the need to be aware of interdependencies and to be able to determine which ones are most important in each situation. Unique in its focus on engineering, this book provides a framework for how to better design, make decisions, and communicate in the new era of global competition.

In this fascinating book, New Yorker business columnist James Surowiecki explores a deceptively simple idea: Large groups of people are smarter than an elite few, no matter how brilliant—better at solving problems, fostering innovation, coming to wise decisions, even predicting the future. With boundless erudition and in delightfully clear prose, Surowiecki ranges across fields as diverse as popular culture, psychology, ant biology, behavioral economics, artificial intelligence, military history, and politics to show how this simple idea offers important lessons for how we live our lives, select our leaders, run our companies, and think about our world.
