The command is `yum install @OpenStack-packstack`. Step 5: Installing services. The below command is used to install all the services or components for OpenStack. The command is `packstack --allinone`. It will install everything and installation complete for OpenStack.

### Install OpenStack | Learn Useful Guide For Installing

To summarize, the basic steps for setting up OpenStack are as follows: Create a basic environment by installing a database, configuring host files; Install the Identity Service; Install the Image Service; Install the Compute Service; and Install the Dashboard so you can log in to the lb interface.

### Step-by-step guide to acing your OpenStack installation

Installation Guide. This section describes how to install and configure the dashboard on the controller node. The only core service required by the dashboard is the Identity service. You can use the dashboard in combination with other services, such as Image service, Compute, and Networking. You can also use the dashboard in environments with stand-alone services such as Object Storage.
