Oracle Database represents the index expression as a virtual column, on which the ANALYZE statement (described in Oracle Database SQL Language Reference) can build a histogram. A function-based index precomputes and stores the value of an expression. Queries can get the value of the expression from the index instead of computing it.

Using Indexes in Database Applications - Oracle

By default, the CREATE INDEX statement creates a btree index. When you create a new table with a primary key, Oracle automatically creates a new index for the primary key columns. Unlike other database systems, Oracle does not automatically create an index for the foreign key columns. Oracle CREATE INDEX examples

Oracle CREATE INDEX - Creating Indexes for One or More Columns

PL/SQL is a procedural language designed specifically to embrace SQL statements within its syntax. PL/SQL

The Associative arrays were the first ever collection type to be created in Oracle in its 7 th version by the name, PL/SQL tables. Ironically, they have never been behaving anything like a traditional heap table back then. From the Oracle version 8, they were given a new name as Index-by tables, meaning that these are tables with index values.
