**River Ecology and Management: Lessons from the Pacific...**

The River Ecology and Management Team conducts basic and applied research on many aspects of aquatic ecosystems. We focus on fluvial systems, from small streams to large rivers, with a particular emphasis on solving real-world conservation problems for aquatic species. Recent large projects have focused on fish migration and fish passage, life history research on migratory species, winter ecology, forest-stream interactions, and fish-mussel host-parasite ecosystems.

Combining passive and active hydroacoustic sensors to collect data of flow and sediment movements greatly advances our understanding of river ecology. The River Analyzer 1 software tool can be used to compile data, as illustrated in Figs. 7.11 and 7.12, create 3D maps for rivers, and generally map 3D flow fields in high detail over large spatial scales (e.g., >100 km), which is often the scale at which large river ecology questions are posed. The technique holds great promise for monitoring ...
