The Rogers Ramanujan Continued Fraction
 The Rogers-Ramanujan continued fraction is a continued fraction discovered by Rogers (1894) and independently by Srinivasa Ramanujan, and closely related to the Rogers-Ramanujan identities. It can be evaluated explicitly for a broad class of values of its argument. Domain coloring representation of the convergent

Rogers–Ramanujan continued fraction - Wikipedia
 The Rogers-Ramanujan continued fraction is a generalized continued fraction defined by $R(q)=(q^{1/5})/(1+q/(1+q^2)/(1+q^3)/(1+...)))$ (1) (Rogers 1894, Ramanujan 1957, Berndt et al. 1996, 1999, 2000). It was discovered by Rogers (1894), independently by Ramanujan around 1913, and again independently by Schur in 1917.

 Ramanujan’s contribution to continued fractions In letters from an “unknown Hindu clerk”, G. H. Hardy, at that time (1913) Cayley Lecturer in Mathematics and Fellow of the Royal Society, received the following theorems, among others. (1) If $u = x 1 + x5 1 + x10 1 + x15 1 + \dots$ and $v = x1/5 1 + x 1 + x2 1 + x3 1 + \dots$ then $v5 = u 1 - 2u +4u2 - 3u3 +u4 1+3u +4u2 +2u3 +u4$. (2)

 In a recent paper G. Bhatnagar has given simple proofs of some of Ramanujan’s continued fractions. In this note we show that some variants of these continued fractions are generating functions of q Schröder-like numbers. 1.Introduction

Ramanujan’s q-continued fractions and Schröder-like numbers
 1+-- From such a humble beginning, Ramanujan wrote down several generalizations and special cases, in the process sometimes rediscovering some continued fractions found earlier by Gauss, Eisenstein and Rogers. As was his way, he did not record his proofs. Proofs were provided over the years, by many mathematicians.

 $n=1, an/bn$ mean a continued fraction $K, n=1, cn/dn$ whose odd or even part is $K, n=1, an/bn$. One can then possibly find the limit in one of three ways: (i) Prove the extension converges and find its limit; (ii) Prove the extension converges and find the limit of the other contraction (for example, the odd part, if $K, n=1$.
